

NutriGrow Structural Soil

NutriGrow Structural Soil is our unique structural soil designed to meet stringent engineering and horticultural standards. Angular quarry rock is manufactured specifically for our requirements and formulated to support intense loading while providing a high volume of void space for air exchange, water movement and healthy root growth. Our batch-blending process and organic stabilizer ensure consistency and keep the soil component evenly distributed throughout the mix during loading, shipping, and placement.

NutriGrow Structural Soil is cost-effective and easy to install. It's a dependable, time-proven solution for preventing damage to sidewalks and boulevards, while allowing valuable urban trees to flourish and increase canopy cover. NutriGrow Structural Soil is your key component for long-term project success.

Core Benefits:

- Increased macropores for air and water exchange provide space for root growth
- Prevents damage and heaving of pavers
- Optimum compaction for construction purposes, cost effective, easy to install

Components:

- 3" blasted quarry rock (angular in shape)
- Organic stabilizer
- High quality growing media customizable per project

Usage and Applications:

- Sustainable urban tree planting
- Safe for use under concrete and asphalt sidewalks and roadways
- Safe for use under permeable and non-permeable pavers

Installation Tips and Recommendations:

- Install per engineered specifications
