

NutriGrow

Commercial Blend Soil

NutriGrow Commercial soils are designed for industrial customers remediating, rehabilitating, or adding new soils at their sites, for the purposes of landfill closures, mine reclamation, and/or to add subsoils. NutriGrow Commercial blend is custom mixed to meet specific customer requirements and utilizes recycled construction products including pre-load sand and clean construction wood waste. Our commercial blends have the same benefits and performance as other NutriGrow soils but may not have the same cosmetic appearance required by commercial landscape projects and residential users.

Commercial Blend Soil	Soil Properties					Nutrients					
	Sands	Fines	Organic Matter	pH	Salts (EC)	Total Nitrogen	Phosphorus	Potassium	Calcium	Magnesium	C/N Ratio
